

# NEW LIFE COMMUNITY CHURCH

**TYPE OF BUILD** Commercial      **SIZE** 12,740 Sq.ft.  
**LOCATION** Pine River, MN      **YEAR BUILT** 2019

## DESIGN HIGHLIGHTS

This building featured 11' 4" walls in the main areas and taller 19' walls in the activity room as well as the gable end which were much more challenging for the volunteer crew. The floors are hydronically heated throughout.

## CONSTRUCTION FACTS

The Logix ICF walls were constructed over a 5 week period with a .06 man hour/sq ft rate which is very impressive for largely volunteer labor.

## RESILIENCE, SUSTAINABILITY & COMFORT NOTES

The average utilities cost for this building are only \$144 for natural gas and \$165 for electricity. This church is designated as a safe room and location for two neighboring schools and the nearby county fairgrounds.

"This was a very successful church community project - with the volunteer labor and the discounted and donated materials this place of worship was constructed at a cost of approximately \$0.51 on the dollar, which is great!"
